Education

CDAC Noida

Post-Graduation Diploma in Big Data Analytics

March 2022 – September 2022

Noida, India

Shatabdi Institute of Engineering and Research, Nashik

B.E Mechanical

July 2015 – November 2020

Maharashtra, India

Experience

Software Trainee:

Atyeti Inc, Pune

October 2024 - Present

- Developing **Python scripts** to automate repetitive and manual data processing tasks, improving operational efficiency and reducing errors.
- Built robust Python-based solutions to process various file formats including **JSON, CSV, and log files**, leveraging **Pandas** and **NumPy** for data manipulation and transformation.
- Worked with **object-oriented design principles** to create modular, scalable, and maintainable codebases.
- Gained hands-on experience with **PySpark** and foundational **data engineering concepts** in **Databricks**, enabling data transformation, filtering, and exploratory analysis.
- Developed a **FastAPI**-based Blog Platform with JWT authentication, SQLAlchemy ORM, and Pydantic schemas.
- Implemented modular CRUD operations, secure login, and RESTful APIs for users and blogs.

Projects

Trading Order Matching System | Python | Multithreading | PyTest | OOP

- Designed and developed a complete electronic trading platform in Python that ingests, validates, matches, and executes financial orders across multiple asset classes using a high-performance price-time priority algorithm.
- Implemented thread-safe order processing with the Singleton design pattern and locking mechanisms to ensure data integrity under heavy concurrent workloads, along with support for partial fills and real-time order status management.
- Built automated tests using PyTest to verify correct functionality, FIFO order execution, validation handling, partial fills, and multi-threaded performance.

Blog API Platform | FastAPI | PostgreSQL | SQLAlchemy | Alembic | Render

- Developed and deployed a fully functional RESTful Blog API using FastAPI, leveraging asynchronous request handling for high performance.
- Designed and implemented relational data models (User, Post, Vote) using SQLAlchemy ORM with a PostgreSQL backend.
- Managed schema evolution and database versioning via Alembic migrations.
- Integrated OAuth2 with JWT authentication for secure login, token-based authorization, and route protection using FastAPI dependencies. Implemented password hashing with Passlib (bcrypt) and token verification with python-jose for enhanced data security.

Certification

- Post Graduation Diploma in Big Data Analytics.
- The Ultimate MySQL Boot Camp (Udemy).
- The Ultimate Beginners Guide to Python NumPy (Udemy).
- The Ultimate Beginners Guide to Data Analysis with Pandas (Udemy).
- KDB+/q Developer Level 2 & Level 3.

Skills

Programming Languages: Python, KDB+/q.

Databases: MySQL, MongoDB.

Technologies/Frameworks/Libraries: Databricks (Basics), Fast API, PySpark (Basics), NumPy, Pandas, PyTest.

Data Visualization Tools: Power BI, Tableau.

Software Development Tools: Visual Studio Code, GitHub.

Soft Skills: Time management / Proper Planning, Leadership Quality.
